

OPEN-SOURCE MODEL ASSESSMENT

Llama 4

L1 · Open weights with a restricted/custom license

Meta · Released 2025-04-05 · Prepared for Enterprise · Report date 2026-07-16

EXECUTIVE SUMMARY

The Llama 4 Community License permits use, reproduction, distribution, creation of derivative works (including commercial products), self-hosting and fine-tuning, but imposes restrictions such as requiring a separate Meta license for products or services exceeding 700 million monthly active users, prohibiting removal of Meta or safety-classifier notices, and mandating compliance with the Llama 4 Acceptable Use Policy. For an enterprise reader, DIT recommends: adopt with caution.

OUR RECOMMENDATION

ADOPT WITH CAUTION

OPENNESS GRADE

L1 · Open weights with a restricted/custom license

LICENSE POSTURE

Separate Meta license required above 700M monthly active users

DECISION AT A GLANCE

[P1] Llama 4 Community License (P1) <https://www.llama.com/licensing/community-license/> · 2025-04-05

02 License summary

YOU ARE ALLOWED TO

- Use, reproduce, distribute and create derivative works, including commercial products
- Self-host and fine-tune the weights

YOU ARE NOT ALLOWED TO

- Use by products or organizations exceeding 700 million monthly active users without a separate Meta license
- Remove Meta or safety-classifier notices
- Use contrary to the Llama 4 Acceptable Use Policy

COMMERCIAL USE

Commercial use is permitted. A separate license from Meta is required only if products or services based on Llama reach more than 700 million monthly active users.

SCALE / COMMERCIAL TRIGGER
Separate Meta license required above 700M monthly active users

03 Deployment and technical profile

MINIMUM HARDWARE
Scout: ~55 GB VRAM (Q4_K_M) fits on a single H100 80GB GPU; Maverick: ~200 GB VRAM (Q4_K_M) requires a multi-GPU host

RUNS FULLY OFFLINE
Yes

DEPLOYMENT VERDICT
needs a small server

TECHNICAL DETAIL

CONTEXT LENGTH
Scout: 10M tokens; Maverick: 1M tokens

PARAMETERS
Scout: 109B total / 17B active (MoE, 16 experts); Maverick: 400B total / 17B active (MoE, 128 experts)

DISTRIBUTION FORMATS
Safetensors, Meta Llama download, GGUF (community, e.g. Unsloth)

PRECISION
BF16 (full); INT4 / GGUF quantizations available

QUANTIZATION IMPACT ON VRAM
Moving from BF16 (2 bytes/param) to Q4_K_M 4-bit reduces VRAM roughly by half: Scout ~109B x 2 B "H 218 GB !" ~55 GB; Maverick ~400B x 2 B "H 800 GB !" ~200 GB.

MINIMUM VRAM
55 GB (Scout Q4_K_M)

VRAM BY VARIANT (MIN, QUANTIZED)

Scout55 GB (Q4_K_M)

Maverick200 GB (Q4_K_M)

Variant	Parameters	Min VRAM	Quant options	Notes
Scout	109B total / 17B active (MoE, 16 experts)	55 GB (Q4_K_M)	Q4_K_M, Q8_0, 1.78-bit Unsloth	Single H100 80GB GPU in 4-bit
Maverick	400B total / 17B active (MoE, 128 experts)	200 GB (Q4_K_M)	Q4_K_M, Q8_0	Multi-GPU server required

04 Decision frames

PRIVATE / INDIVIDUAL

For individual developers and researchers, Llama 4 can be self-hosted, fine-tuned and used to build applications without any licensing fee as long as the resulting service stays below 700 million monthly active users and complies with the Acceptable Use Policy. The model's weights are openly available, enabling offline

ADOPT

ENTERPRISE

Enterprises may deploy Llama 4 internally or in products, benefitting from commercial-use permission. However, if the deployed product or service is expected to surpass 700 million monthly active users, a separate Meta license must be negotiated. Additionally, outputs must not violate the Acceptable Use Policy, and Meta notices must be retained.

ADOPT WITH CAUTION

NON-PROFIT / PUBLIC

Non-profit organizations enjoy the same commercial-use rights as for-profit entities, subject to the 700 million MAU threshold and Acceptable Use Policy. There is no fee for using the weights, but they must monitor usage to avoid crossing the trigger that requires a separate Meta license.

ADOPT WITH CAUTION

05 Where sources disagree

No substantive disagreements; source [5] (third-party blog) aligns with authoritative VRAM figures, and source [6] (Reddit) discusses quantization methods without conflict.

06 Sources and attribution

This report was synthesized with the DIT OpenModel Synthesis Framework (OMSF), a practical, buyer-side adaptation of the Model Openness Framework (LF AI and Data Foundation, 2024; arXiv:2403.13784) and the OSI Open Source AI Definition. Figures are sourced from the web at report date and reflect publicly available information only.
